

SCREENING ELISA ASSAYS

PAPP-A ELISA

Highly sensitive PAPP-A ELISA.

- IRP 76/610 & UKNEQAS TRACEABLE.
- Limit of Detection: 15 ng/ml.
- Excellent Method Correlation

INHIBIN-A ELISA

Quantitative Dimeric Inhibin A detection.

- Adaptable to all ELISA systems and manual use.
- Limit of Detection: <5 pg/ml
- No sample preparation.
- Excellent method correlation with commercial Elisa assays.

AMH ELISA

Innovative ELISA assay for Anti-Mullerian Hormone.

- Excellent Intra and Inter assay precision
- Limit of Detection: 0.15 ng/ml
- Excellent method correlation with commercial ELISA assays.
- Most competitive price.

FREE β -hCG ELISA

- Limit of Detection: 0.05 ng/ml.
- Excellent method correlation.
- No significant cross reactivity.

UE3 ELISA

- Critical test for monitoring fetal well being.
- Limit of Detection: 0.11 ng/ml.
- Excellent intra & inter assay precision.

AFP ELISA

- Useful marker for the diagnosis of liver carcinoma & fetal abnormalities.
- Limit of Detection: 1 ng/ml
- Excellent method correlation.
